

Controp's STAMP payloads

The STAMP Stabilised Miniature payloads from Israel's CONTROP Precision Technologies Ltd was recently selected as the chosen EO/IR payloads for one of the most important strategic Israeli mini UAV programmes, the STAMP family of gyro-stabilised miniature payloads, includes the D-STAMP with a CCD camera for daylight applications and the newest

breakthrough U-STAMP with an uncooled IR dual field-of-view camera for night-time applications. These revolutionary new systems provide a striking look at the world from the view of a mini-UAV – up to 2000 feet overhead.

The D-STAMP is a daylight stabilised miniature payload with three gimbals weighing from only 750 grams and

the U-STAMP is an uncooled infrared camera with a dual field of view and a X4 continuous optical zoom lens, weighing a mere 1000 grams. These cameras are fully operational with proven performance in detecting targets with unsurpassed reliability.

The STAMP Payloads are displayed at the CONTROP stand in Hall A, Stand 1, Israel Pavilion.
