## 'Virtual' Fence On India's Coastline

---

**C**ontrop Precision Technologies has evolved advanced security systems for homeland security. These systems, which provide a 'virtual' fence over the water, automatically detect intruders including small boats and swimmers from the sea. Recognition, identification and tracking of intruders are the key to protection and direction of the security forces to the exact location. Controp systems also provide surveillance and observation at airports for flight safety, ground taxi control and air control, even in the darkness. •
