AERO INDIA 2009

Controp Shows Surveillance Range

Israel's Controp Precision Technologies is exhibiting several of its surveillance systems products at Aero India. These include the latest Speed-A three-axis gyro-stabilized payload, specifically developed for use on tactical aerostats (surveillance balloons). Speed-A includes a day and night camera as well as a laser rangefinder. Also on show is the Fox thermal imaging camera with a 1400mm lens and x35 continuous zoom. This system, already in service in India, provides exceptionally long range target acquisition and observation with unmatched performance in night vision.
